1 Summary

Soort van abstract, kunnen we aan het eind een totale, korte samenvatting maken van ons project.

2 Problem

The University of Twente has approximately 1500 Wi-Fi Access Points (*WAPs*), and the configuration of those points are kept in Excel. This makes it rather difficult to move these WAPs around, since every change has to be manually entered. Coupled with a need for a lot of changes - replacements of WAPs, moving them around, rebuilding and maintenance of buildings -, a more modular and easily accessible program is preferred. Specifically, a program with a user-friendly graphical user interface, where the end-user can use their mouse to easily move, remove or add WAPs to the UT buildings.

3 Objectives

Willen we dit ook doen? De doelstellingen van ons product gewoon.

4 Solution

Hoe ons product eruit gaan zien; hoe we onze doelstellingen gaan halen, etc.

5 Planning

Per week een overzicht van wat we doen. We noemen de weken natuurlijk Sprints
